

**Audience Poll Documentation Sheet**  
 University of Florida/IFAS Extension – Jackson County  
 “Jackson County 4-H Embryology Program”

\*IMPORTANT: The program facilitator should not collect this information, or be in the room when hands are being raised, as this can bias results—we want participants to be honest and not say something to make the educator feel good. So appoint a volunteer leader to help.

<b>Program objectives: To develop small group communication skills through one-on-one mentoring and group activities. To develop a greater awareness of embryology and animal science.</b>	<b>Total # of Participants</b>	
	<b># Affirmative Responses</b>	<b># Negative Responses</b>
1. Raise your hand if you can explain what the egg develops into.		
2. Raise your hand if you can explain the importance of temperature in incubation of eggs.		
3. Raise your hand if you can explain how long it takes the egg to develop.		
4. Raise your hand if you know how we can see what is going on inside the egg.		
5. Raise you know what the center of the egg is called and what color it is.		

To facilitate recording of results, you can record **either** the positive **or** negative responses, whichever is the smaller number and is easier to count. To calculate results, divide the number of affirmative responses by the total number of total participants.
