12-Step Tree Adoption
Aftercare Program

1. Look up! Avoid planting under overhead power wires and streetlights.
2. Call 811 to locate underground utilities, before digging a hole.
3. Select a planting location at least 6-8 ft. from pavements, & 15 feet from the nearest building.
4. Dig a hole 2-3 times WIDER, but the SAME length/depth as the root ball.
5. Gently remove root ball from container and check for root defects e.g. circling roots; if present, slit circling roots at diagonal points of an ‘X’ around the root ball.
6. Carefully place tree in the planting hole and position top of root ball 1-2 inches above the soil level.
7. Straighten the tree.
8. Half-fill the planting hole with soil.
9. Fill planting hole with water to get rid of air pockets.
10. Finish backfilling the hole with soil.
11. Add mulch in an 8 ft. diameter ‘doughnut’ around the tree but keep it away from touching the trunk.
12. Water (1 gallon) daily first 2 weeks; next 2 months - every other day; next 3 months - weekly.
